BEM Graduate Engineer (Chemical) | Project Engineer | R&D | Data Analytics | Risk Assessments

OBJECTIVE

Dedicated field project engineer with experience in providing excellent performance in technology installation, commissioning and after service maintenance services that focuses on preventive approach for critical equipment failure through early detection of mechanical damage across land and offshore facilities. Certified safety practitioner credited by NIOSH and experienced in safety related documentation task. Strictly adhere to industry standards and regulatory requirements in maintaining a fully-compliance workflow. Seeking to position myself in a dynamic team to continue learning and delivering performance, productivity and quality.

WORK EXPERIENCE

Institute of Technology PETRONAS (ITPSB)

(Aug 2023 – May 2026)

Project Engineer / Research Officer (Contract)

2 years, 9 months

- Successfully delivered installation, testing, commissioning and after-sales maintenance for assets integrity diagnostics hardware at more than 10 fields within Malaysia and Gulf of Thailand for offshore facility.
- Responded proactively to engineering management of change (EMOC) that involves equipment in interest to re-calibrate and revised technology efficiency.
- Significantly prevented unplanned shutdown through early detection of mechanical damage by installing real time crack monitoring technology, providing reliable equipment integrity data during operations.
- Minimized diagnostic hardware downtime through 3 levels verification tests from factory, user to site acceptance test, ensuring maximum efficiency during operations.
- Optimized project execution timeline and resource allocation through proactive monitoring based on reliable s-curve and provided mitigation option measures in events of delay.
- Responsible in analysing technical drawings including general assembly (GA), isometrics and P&IDs for risk analysis, determining data-driven risk status and prediction of remaining life for static equipments.
- Addressed documentation preparation and team members requirement prior to start field work which includes equipment inspection, job hazard analysis (JHA) and permit application.
- Delivered timely technical reports and regular updates for internal and external parties, providing data visualization through Power BI platform.
- Certified safety coordinator with expertise in risk assessment based on HIRARC framework, ensuring maximum safety measures prior to project execution until completion stage.
- Ensuring full compliance with industry standards and regulatory bodies to govern with HSSE requirements, promising a sustainable collaboration and business development.

Key Achievements:

- Delivered timely execution for real time damage monitoring technology through hardware installation, testing, start-up and regular maintenance for critical equipments.
- Improved NDT inspection accuracy for heat exchangers by providing critical tube mapping for scope prioritization based on predictive analysis to complement existing RBI.
- Strongly supported extension of certificate of fitness (CF) with 3 years extension, issued by DOSH for one reactor unit in PDH plant.

CERTIFICATES AND QUALIFICATIONS

- Well Control Awareness Level 1 - IWCF
- Well Operations Crew Resource Management - IWCF
- **Graduate Engineer** (Chemical), Board of Engineers Malaysia (**BEM**)
- Occupational Safety and Health Coordinator, NIOSH
- Power BI Mastery: Design, Govern and Deliver Cutting-Edge Data Solutions, Trainocate MY
- T-BOSIET with CAEBS and Travel Safely by Boat, OPITO
- Basic Hydrogen Sulphide (H₂S), OPITO
- Authorized Entrant and Standby Person (AESP), NIOSH
- Oil and Gas Safety Passport (OGSP), NIOSH

PROJECTS

- Statistical Tube Exchangers Assessment and Remaining Life Study
- Smart Crack Technology Instrument (SCTi) for Mechanical Damage Monitoring (PCFK, PCMTBE, PCMTBE-PDH, PRPC)
- Acoustic Emission Testing on CPOC MUDA Filter Coalescer (Offshore Application)
- Turnaround PETRONAS Chemicals MTBE 2023
- Turnaround PETRONAS Chemicals Ammonia 2023
- Final Year Project: Screening of Various Cationic Gemini Surfactants as Corrosion Inhibitors
- Process Plant Design: Production of Nitric Acid through Ostwald's Process with Net Zero Emission

EDUCATIONAL BACKGROUND

University of Technology PETRONAS (UTP)

(May 2019 – May 2023)

Bachelor of Chemical Engineering (Hons.)

Second-Class Upper

University of Technology PETRONAS (UTP)

(March 2018 – March 2019)

Foundation of Engineering

SKILLS

Documentation	: Job Hazard Analysis (JHA), HIRARC, Permit to Work (PTW), S-Curve, Technical Reporting
Regulations & Standards	: OSHA 1994, FMA 1967 API (510, 571, 580), ASTM, ASME
Software	: Microsoft 365, Microsoft Project, Power BI, Copilot, Adobe Packages, ChatGPT Research, SharePoint, Aspen HYSYS
Programming	: HyperText Markup Language (HTML), Cascading Style Sheet (CSS), JavaScript
Languages	: Bahasa Malaysia (Native), English (Fluent)
